(54) Title: A DEVICE FOR RELEASABLE MOUNTING OF A BUNDLE OF BAGS ON A WALL

(57) Abstract: A device for releasably mounting a bundle (30) of bags on a wall (2), said device comprising a wall-mounted suspension fitting (1), wherein one rear major surface of the bag bundle is connected to a sheet (40) which is parallel with said bundle and which is adapted for releasable co-action with the fitting (1), and wherein the bags (32) in said bundle are releasably (36) connected to said sheet at there respective opening regions. According to the invention, the sheet has an opening (45) midway of its width and the fitting has upwardly directed clip-finger (11) which includes in an upper portion of its side facing towards the wall (2) a projection (15) that can be received in the opening (45) in the sheet (40), and the projection (15) has two vertically separated oblique surfaces (16, 17) which are mutually convergent in a direction towards said wall for co-action with the upper and lower edges of the sheet opening.
